

I310 Security Policy – Mechanism Case Study

Deliverable: write-up detailing your recommendations to protect the internal organization systems and infrastructure as well as provide secure access for recommended remote access (similar to what we did in class) **100 pts**

- 1. List Security Policies you feel are critical to running a secure business**
- 2. List Security Mechanisms that would be required to help enforce the policies.**

Answer points based on completeness.

You were just hired as CISO for the following organization. Your task is to identify security policies and mechanisms for to allow remote clients (laptops) remote access into your company (which has sensitive data). Based on user and company access (illustration below) what security polices and mechanisms you would implement based on course content/material, points based on completeness of answer (need to address all threats discussed in class).
